

Who we are

AVADH MOLDS is built on a strong foundation of precision engineering and advanced machining excellence established since 2006. With over two decades of hands-on experience in manufacturing complex and high-precision components, our team has consistently delivered engineering solutions across demanding industrial sectors.

Our journey began in the complex machining industry, where accuracy, durability, and technical expertise are not optional — they are essential. Over the years, we have developed intricate parts requiring micron-level precision, strengthening our technical depth and manufacturing discipline.

Though AVADH MOLDS was established 8 months ago, it stands firmly on 20+ years of engineering expertise, process knowledge, and continuous innovation.

We do not just manufacture Molds.

We engineer performance.

Our Foundation of Strength

Our growth has been driven by continuous investment in advanced in-house CNC infrastructure, including:

- Vertical Machining Centres (VMC)
3000x2000mm 1321x495mm
- Horizontal Machining Centres (HMC)
- CNC Turning Centres
- Boring Machines
- Precision Tooling & Inspection Systems

This integrated manufacturing ecosystem allows us to maintain complete control over:

- Dimensional accuracy
- Surface finish quality
- Structural strength
- Production consistency

Every Mold is built with engineering discipline, not approximation.

Our Specialization

AVADH MOLDS focuses on manufacturing high-performance Molds for automatic block-making machines used in:

- Paver Blocks
- Kerb Stones
- Concrete Products
- Hollow Blocks
- Construction & Infrastructure Applications

Our Molds are designed for:

- ✓ High Strength & Structural Integrity
- ✓ Long Operational Life
- ✓ Dimensional Precision
- ✓ Smooth Demoulding Performance
- ✓ Reliable Output in High-Cycle Production

Research-Driven Development

Being new as a brand gives us one powerful advantage — adaptability.

Our team is actively engaged in:

- Continuous Mold design optimization
- Structural reinforcement improvements
- Material selection enhancement
- Performance-based modifications
- Machine compatibility refinement

We combine traditional machining mastery with modern engineering thinking to create Molds that are stronger, more reliable, and built for long-term production stability.

Global Manufacturing Vision

AVADH MOLDS is strategically positioned to serve international markets with precision-engineered Mold solutions built to global manufacturing standards. Backed by over 20 years of machining expertise, we understand the performance expectations, dimensional tolerances, and durability requirements demanded by leading global machine manufacturers.

Our infrastructure, process control systems, and engineering discipline enable us to manufacture Molds compatible with international automatic block-making machines while maintaining strict quality consistency and production reliability.

We are committed to:

- ✓ Adhering to international quality benchmarks
- ✓ Delivering export-ready packaging and logistics coordination
- ✓ Maintaining transparent technical communication
- ✓ Ensuring long-term performance reliability in high-cycle production environments

Though young as a specialized Mold brand, AVADH MOLDS operates with the maturity, capability, and technical strength of an experienced global manufacturing partner.

We aim not only to supply Molds — but to build long-term international partnerships based on precision, trust, and performance.

Engineering & Design Strength

Our in-house design support ensures manufacturability and performance optimization.

- 3D Modelling & Engineering using SolidWorks
- Production-Oriented Design Improvements
- Mold Compatibility Development
- Custom Industrial Component Design

Every project undergoes technical evaluation to ensure dimensional precision, fitment accuracy, and production efficiency.

Infrastructure & Machine Shop Capacity

Our manufacturing facility is structured to handle both medium and heavy-duty industrial requirements with high dimensional accuracy and process consistency.

Core Capabilities

- CNC Milling & VMC Machining
- Heavy Plate Machining & Profiling
- Precision Drilling, Boring & Tapping
- Mold Base Manufacturing
- Industrial Fixture & Tooling Development
- Heavy Structural Fabrication
- Precision Welding & Assembly

Proven Performance | Trusted Manufacturing Partner

Successful Production Projects

We have successfully manufactured and commissioned high-performance Molds and industrial components that are actively running in production environments with stable and consistent output.

Key Achievements

- 200 x 100 x 80 mm & 200 x 200 x 80 mm Paver Block Mould – Successfully running and producing uniform solid blocks with superior surface finish and dimensional consistency.
- Kerb Stone Moulds developed for leading block machine manufacturers.
- Custom-designed Molds engineered for operational durability and long service life.

Our products are not only manufactured — they are performance-validated in real production conditions.

AVADH MOLDS

A PART OF AVADH ENTERPRISE

Experience with Leading Machine Manufacturers

We have manufactured Molds compatible with machines from:

- **APOLLO ZENITH**
- **Q GREEN TECHCON**

Through structured research and daily engineering refinement, our team has developed deep understanding of machine integration, Mold alignment, and production stability.

“Engineered in India. Built for the World.”
